

Kimberley Communities Solar Saver

By sharing solar, Kimberley communities can save on electricity. We're bringing a new way to share the cleaner, cheaper benefits of solar power to the Kimberley region.

HORIZON
POWER

By sharing solar, you and your community could save on electricity. We're bringing a new way to share the cleaner, cheaper benefits of solar power to the Kimberley region.

What is happening?

Our Horizon Power teams and solar experts we trust will be installing solar power systems on the rooftops of around 400 homes across the Kimberley* over 2024 and 2025.

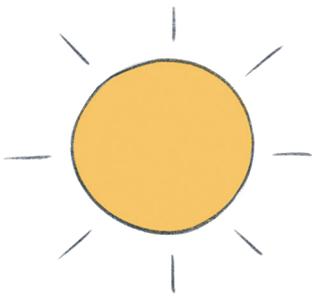

Instead of relying on diesel generators, community residents will be able to enjoy the benefits of shared solar power for a cleaner and cheaper type of electricity.

The power of the sun

Having solar installed means the sun's rays can be turned into electricity. This happens during the day when the sun is shining, so shared solar won't replace diesel generators completely. But more of your power will come from the sun and less from diesel generators.

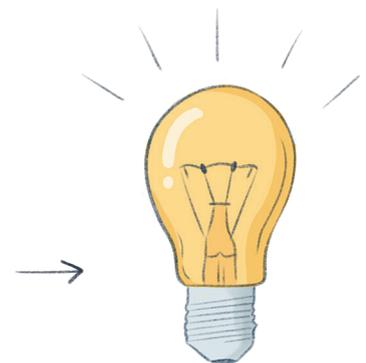

Sunshines on...

...rooftop solar panels...

...making power

Not every location or roof is right for solar. It depends on which way the roof is facing, roof shading, how much space there is and some other factors.

With community solar, it doesn't matter which rooftops have solar panels installed. Everyone in your community could still be able to use shared solar power during the day.

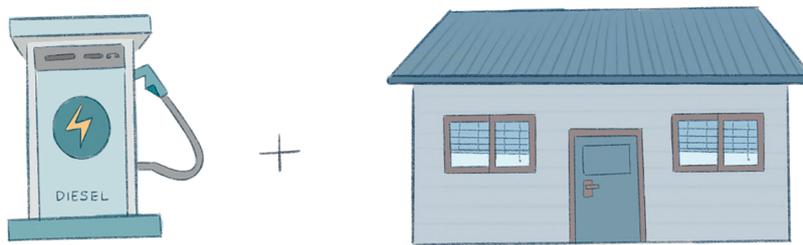

Your community can benefit from shared solar

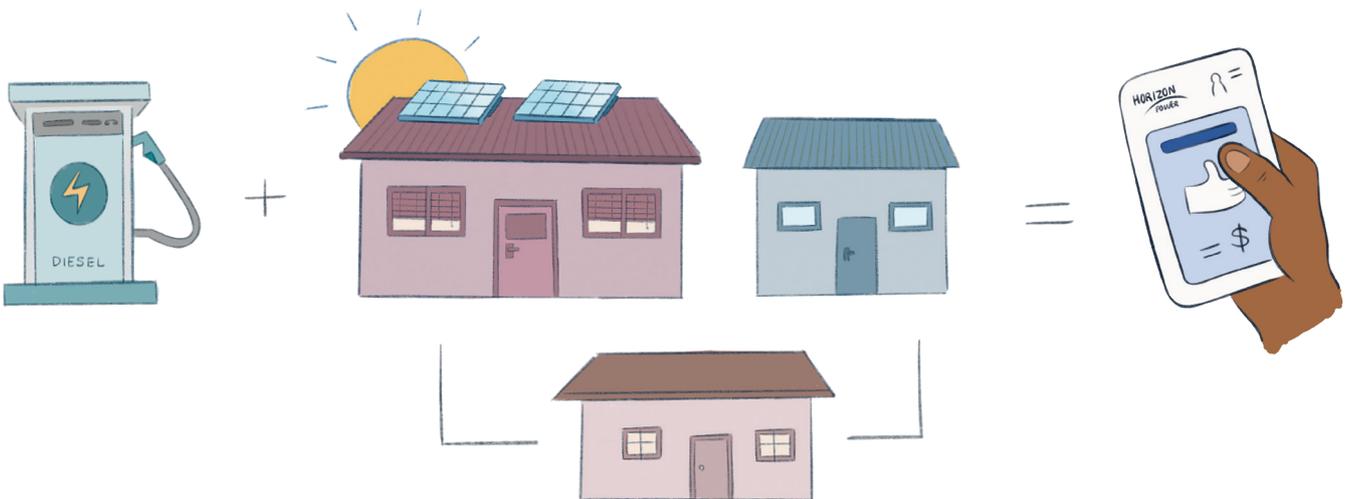

Using shared solar when the sun is shining means you'll be able to use less electricity generated by diesel. This could help you, and others in your community, save on electricity.

Community solar is a new way of sharing energy – it's solar power designed to benefit everyone. No matter whose roof it's on, looking after our solar generation can help your community now and into the future.

Diesel only = no savings

Diesel with solar = You and community save

Find out more

The installation of solar panels will start to take place in Warmun from April 2024. If you have questions about the Kimberley Communities Solar Saver project, we're here to help.
